

Furniture for people

Secure storage: S 5000

Resisto

Trust the professionals when you need to lock something up safely. C+P Möbelsysteme is a globally active market leader in assembled box lockers and cloakroom lockers made of steel.

Security from the market leader.

We have the perfect solution wherever you need order and security – backed up by decades of experience.

Top marks:
Resisto assembled box lockers are ideal for schools and universities.

Nurseries and schools

... can be a tough place for lockers. A boisterous kick to the door is not uncommon. C+P has the perfect solution – Resisto doors are designed to withstand high-spirited youngsters.

Universities and educational institutions

... pose a whole host of challenges: the lockers need to offer plenty of storage space, stand up to frequent use, and close automatically to keep escape routes clear.

Small but impressive:
The small Resisto has a durable cover plate.

Classic:
Intro assembled box lockers – sturdy classics offering a wide range of compartment sizes.

Sports, fitness and wellness facilities

Office and administration

Shopping centres and retail warehouses

Differing requirements necessitate a broad choice of compartment sizes, from double-tier cloakroom lockers to small compartment lockers, preferably with online and offline electronic locking systems.

An office environment demands high quality solutions that blend in with their surroundings. The idea of combining a place to sit and converse with an elegant yet durable storage solution is simply brilliant.

Assembled box lockers need to be sturdy and easy to operate. They should also be pleasing to the eye, transparent for ease of monitoring, and function reliably – like the C+P Intro series with twin coin deposit locks, for example.

Open wardrobes:
Resisto is also available as an open wardrobe – e.g. for office use.

Right for the age group

The small version of Resisto is ideal for nurseries and primary schools.

Fits in anywhere:
The small version of Resisto is also available with just two adjacent compartments.

Sturdy and secure:
The special curved design makes the 1.5 mm thick steel doors extremely stable – sturdy and tamper proof.

Lots of storage space:
Sufficient room and security for everything at last – nothing gets squashed or crushed!

Assembled box lockers in schools and nurseries have to take lots of punishment. Resisto is made for the job - the special doors not only look attractive, they can also take whatever kicks are thrown at them!

Little lockers for little people.

Resisto lockers have a levelling mechanism that can be easily adjusted from the inside to compensate for uneven floors.

Colourful:
Thanks to the versatility of steel you can choose from a wide range of attractive colour coatings.

Small and compact:
The smallest locker in the Intro series: just 620 mm wide with 6 compartments.

Things that are safely locked away cannot go missing – which holds as true for kids' belongings as anything else. We have lockers with easy-to-reach compartments especially for children. Whether you opt for the Resisto or the Intro series (see illustration above) depends on the planned use and location.

Practical tips

It's your choice!

Resisto

- Special doors, curved and tamper proof.
- Integrated door limiter with 80° opening angle to protect the adjacent door. Automatic door closure available on request (e.g. for installation near escape routes).
- Two compartment sizes (each 350 mm wide) and three locker depths for universal use.

Resisto is the right choice if you need sturdy lockers with a unique visual design.

Intro

- Single or double-walled flat doors, depending on the compartment size.
- Door opening angle 170° (e.g. for installation near escape routes).
- Ten different compartment sizes (300 mm or 400 mm wide) and two locker depths for all types of use.

Intro is the attractive solution with flat doors and several different compartment sizes to adapt to any storage needs.

One locker – numerous compartments:
Another variation on Intro: 920 mm wide locker with 9 compartments, compartment width 300 mm.

HÖRSAAL C

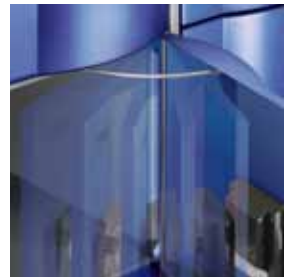

Intelligent

Students can focus on their studies, knowing their belongings are safely stored in Resisto assembled box lockers.

Academies, colleges and universities compete for the best brains. Students choose a college or university not just on the basis of the course itself; their decision is also influenced by the general environment.

High level.

Institutions that aim to attract the best students and raise their academic profile are aware of the importance of these factors. Resisto assembled box lockers offer decisive added value: tidiness, security, plus intelligent features for a smooth day of study.

Automatic door closure:
Resisto doors can be fitted with automatic door closure on request (e.g. for installation near escape routes).

State of the art:
Assembled box locker systems with central operating terminal and biometric scanner (using fingerprint as key) offer maximum convenience and security.

Practical tips

No more 'blocked' lockers

Until recently the unauthorized long-term use of lockers was a common problem in universities and libraries. Resisto provides the ideal solution for any usage concept:

- Deposit locks which 'penalize' unauthorized key removal.
- PIN locks with master code for central access.
- Combined PIN / deposit locks to prevent deliberate locking of several compartments.
- Right up to electronic online locking systems using a student's electronic ID as the key. Usage can be monitored, assigned a time limit, and documented at all times to prevent unnoticed misuse.

Adaptable:
Resisto lockers are available in two compartment heights and three locker depths to suit any requirements.

Lots of storage space:
Enough room for everything at last! Even a full-face helmet will fit easily in a Resisto compartment.

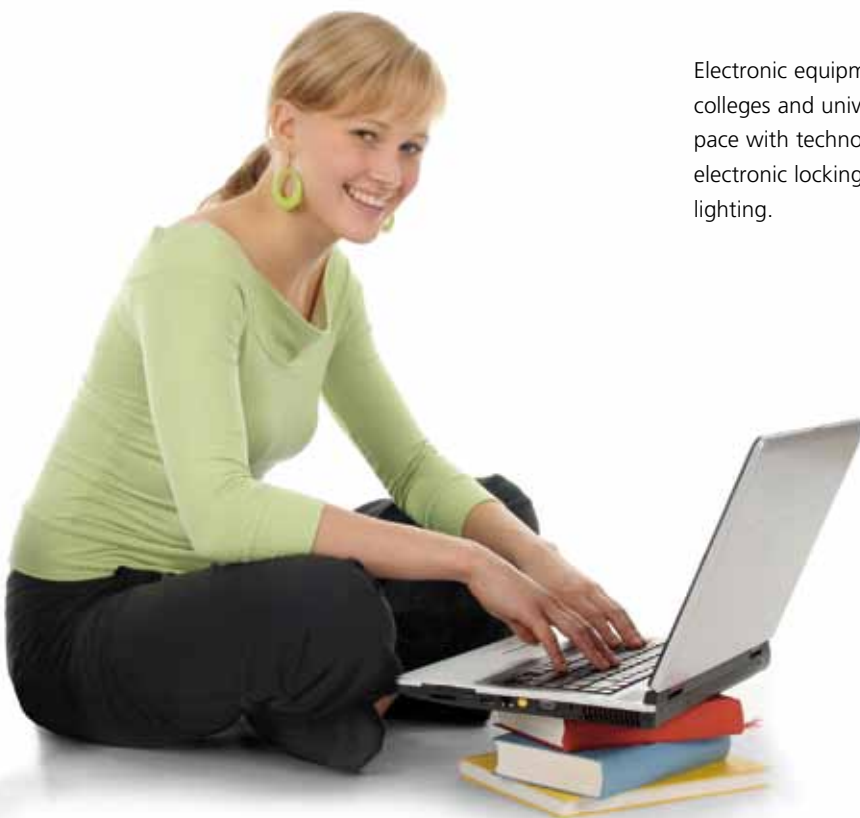

Power supply:
As an option, each compartment can be fitted with two 230 V sockets to recharge laptops or mobile phones in no time.

Online locking systems:
For electronic student IDs, for example, which can be used as keys.

Offline locking systems:
With PIN function or separate data carrier – available in several different versions.

Electronic equipment is nowadays commonplace in colleges and universities. Locker systems should keep pace with technology. Resisto is state of the art, offering electronic locking systems, sockets and integrated LED lighting.

Perfect

Extra-deep bag lockers – also available in the family-friendly double-tier version – are perfect for changing rooms in sports and fitness facilities.

DUSCHE

SAUNA

Labelling and orientation:
 Compartment numbering and locker row labelling for easy orientation.

740 mm deep:
 This larger version of the Resisto series has enough room for even large sports bags.

Visitors to sports, fitness, leisure and wellness facilities primarily want to relax, devote time to themselves and switch off from everyday worries. Well designed locker and changing rooms are an important factor.

Wellness from the outset.

C+P bag lockers are designed to make sure the wellness experience starts right away: convenient and spacious compartments that are easy to operate. Accessories that set the tone. Extra equipment that offers practical benefits.

Practical tips

The right compartment size

The annoying thing about many lockers and changing facilities is that the compartments are too small, and users have to literally squash their possessions to make them fit. C+P offers a better solution:

- The Resisto series includes extra-deep versions for large sports bags.
- Think “one size up” when planning your compartments. That way they will be able to cope with the increasing number of larger bags.
- A compartment width of 400 mm is available in the Intro series.
- Score valuable points with your visitors by providing adequate space and a pleasant atmosphere before they even see the actual facilities! You don’t get a second chance at a first impression!

Small compartment system with central display:
 The central terminal for the electronic locking system indicates which compartment is free.

Space-saving small compartment lockers are ideal for storing just a few necessities – whether as stand-alone solutions or as an addition to changing room and bag lockers. Electronic locking systems are the ideal solution, allowing access to an additional small compartment (for example elsewhere on the premises) using the same data carrier.

On the safe side:
 Valuables and electronic equipment are safe in small compartment lockers.

Fingerprints as keys:
 Electronic locking systems with biometric scanners are secure and convenient – the simplest possible solution!

Matching benches and changing benches:
 Changing in relaxed surroundings: Matching benches are essential in any locker room or changing room in a sports facility.

Marketplace

Personal storage where you need it: a place for people to relax and chat, with integrated Resisto lockers.

Staff IDs as keys:
 Everyone is assigned a personal locker. Or alternatively, whichever one happens to be free. Resisto leaves the choice up to you.

Furnishings and ambience are important factors in any office when it comes to enhancing motivation and productivity. This includes the comfort of knowing that personal belongings are securely stored.

A touch of style for the office.

In the spotlight:
 Optional interior LED to light up even the darkest corners.

Safe place for your valuables:
 Purses, wallets, briefcases or laptops: C+P locker solutions keep your valuables safe at the office.

The locking system can be incorporated into existing time logging and access control systems. C+P seamlessly integrates state-of-the-art locker technology into modern, sophisticated office environments.

Elegant locker and wardrobe unit:
 With self-ventilating concept to allow damp clothes to dry out quickly.

Open wardrobe:
Resisto is also available as an elegant open wardrobe for the office.

Lots of storage space:
Resisto compartments contain plenty of room for many different uses.

Neat and tidy:
The central sections of the open wardrobes have a hat rack at the top, a hanger for each user and bag storage at the bottom.

Certain minimum standards apply even in office and administrative areas. Each employee needs a lockable security compartment and a clothes hanger. C+P offers a wide range of locker and wardrobe solutions for the office.

Relaxed

*Stress-free shopping:
Providing lockers allows
shoppers to enjoy shop-
ping without worrying
about heavy bags.*

Steel

Acrylic glass

Intro front design:
The sturdy steel system carcass is an ideal basis for a wide range of door designs.

Assembled box lockers from C+P actively promote customer loyalty. Giving good service encourages customers to return.

So your customers keep coming back.

Customers can stow belongings they do not need and continue stress-free shopping, with mind and hands free to focus on the important things.

SAFE-O-PIN lock:
Keyless SAFE-O-PIN locks are convenient and easy to use. The optional additional coin deposit function prevents lockers from being closed without authorization.

Twin coin deposit lock:
Accepts two different coins, so users will almost always have one that fits.

Intro lockers for shopping centres and retail warehouses can fulfil a wide range of functions. Different compartment sizes provide the right option for every user. A choice of door materials allows operators to create the desired visual design and provide the necessary security requirements. And the locking systems are maintenance-free for maximum convenience.

Intro assembled box locker:
Sturdy steel carcass with transparent doors made of acrylic glass.

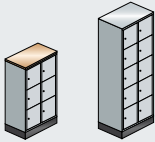

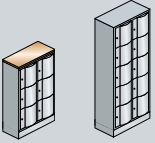

Various factors determine which locker series is right for which application. These pages provide brief descriptions of the different series for initial guidance, together with practical tips on suitable locations.

S 4000 Intro

Well thought through.

The difference is in the detail! S 5000 Resisto and S 4000 Intro offer much more than you expect. Clever and well thought through – typical C+P.

Equipment solutions for lockers

Cover plate:
Durable DBS cover plates protect the top of the half-height lockers.

Power supply:
As an option, each compartment can be fitted with two 230 V sockets.

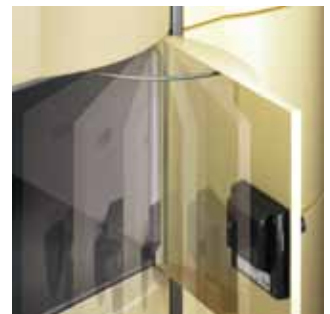

Lighting:
Optional interior LED to light up even the darkest corners.

Sturdy and secure

Tamper proof:
The 1.5 mm curved steel doors make Resisto extremely sturdy.

Door opening limiter 80°:
Prevents damage to the door of the adjacent Resisto locker. Also available with automatic door closure.

Labelling and orientation

Lock numbering with door protection:
The elegant key plate with interchangeable numbering protects the door from damage.

Door numbering:
The foil numbers on the door are available in black grey or silver.

Mechanical locking systems

Cylinder lock with 2 keys:
With cylinder barrel, pin cylinder or sheet lock. Optionally available with master key function.

Safety turning bolt:
The locking mechanism cannot be damaged by over-rotation since the lock cylinder does not snap into place until the padlock has been removed.

Mechanical locking systems

SAFE-O-MAT lock:
With convenient twin coin deposit lock...

...or as token-operated lock:
With large cashbox (twin-coin multi-use).

Ticket-operated locks:
The practical solution found at many swimming pools: the admission ticket dispensed by the machine also serves as a deposit. Staff IDs or club membership cards can also be used.

Electronic offline locking systems

PIN lock:
The simple solution with individually selectable PIN. Ideal wherever keys or data carriers are not wanted.

Digilock locking system:
Programmable system with individually selectable PIN and additional locking options.

SAFE-O-PIN lock:
With individually selectable PIN. Ideal wherever keys or data carriers are not wanted. (Also available with additional coin deposit function)

SAFE-O-TRONIC® lock:
Electronic transponder locking system with various forms of data carrier integratio.

Electronic online locking systems

GAT locking system with central information display:
The compartment is opened by data carrier directly on the locker, whereas the central display provides information about which compartments are in use and which compartments are free.

METRA locking system with central terminal:
The compartment is opened by either data carrier or fingerprint biometric scan on the central terminal.

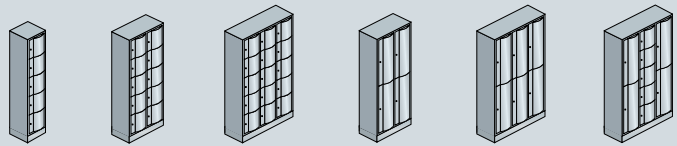

It's your choice.

We have incorporated a wide range of options into our Resisto and Intro series to enable us to offer the right locker for every application. You can bet our range has the right model for you, too.

Your C+P furniture consultant will be glad to give you more information and to demonstrate the ideal solution for you.
