INTRODUCTION

In today's world, personal storage solutions play an essential role in delivering better buildings. They enable flexibility for workspaces, healthcare facilities, buildings for education, leisure spaces and even retail experiences. People need easy-to-use lockers, while facilities managers require flexible and easy-to-manage secure solutions for various user requirements – lockers, mail-boxes, end-of-trip storage and more.

Interior products positively contribute to the wellbeing of the building's users. If you get the products and performance combination right, the users will be more content, productive and loyal. Clients are learning; 'Look after the people who use your buildings, and they will look after your business'.

At **allied**, we believe that a building's interior and the products that create it are how you put people first, by making choices based on performance and impact rather than purely aesthetics.

Jane Delany
Director

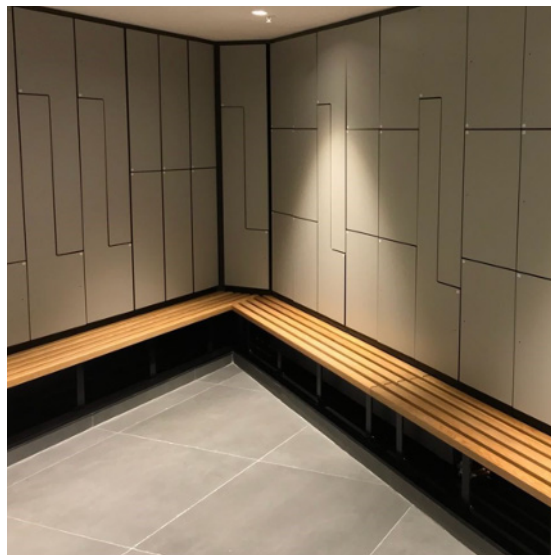

“Excellent communication during the design and space planning stages and the management on site, second to none.

allied are a tried and trusted performer on our supply chain.”

“Positive and proactive in everything that is requested of them, even if outside their scope.

Their collaborative and engaged approach has been impressive on every project.”

“**allied** proved to be understanding and responsive to changes, whilst maintaining programme. Their communication is clear, concise and considered.”

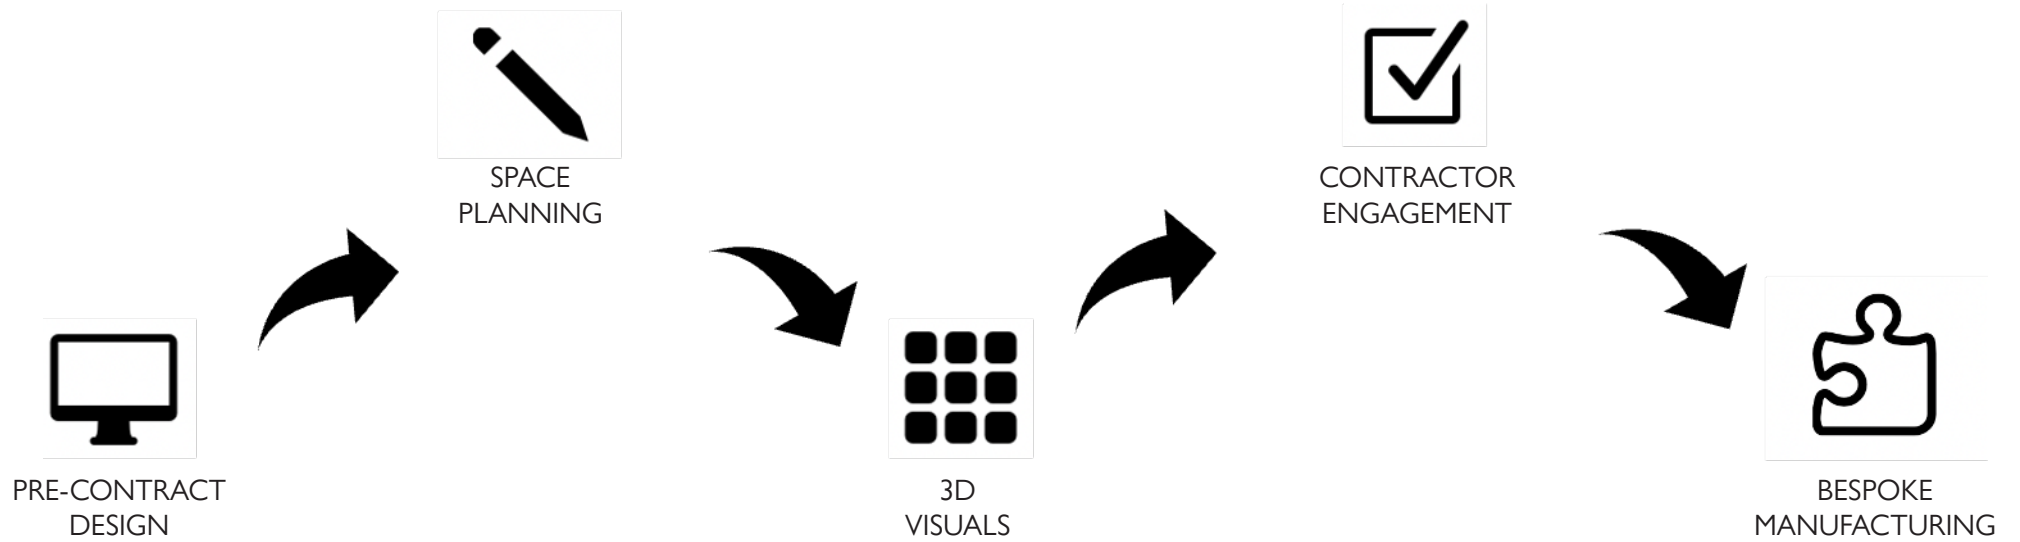

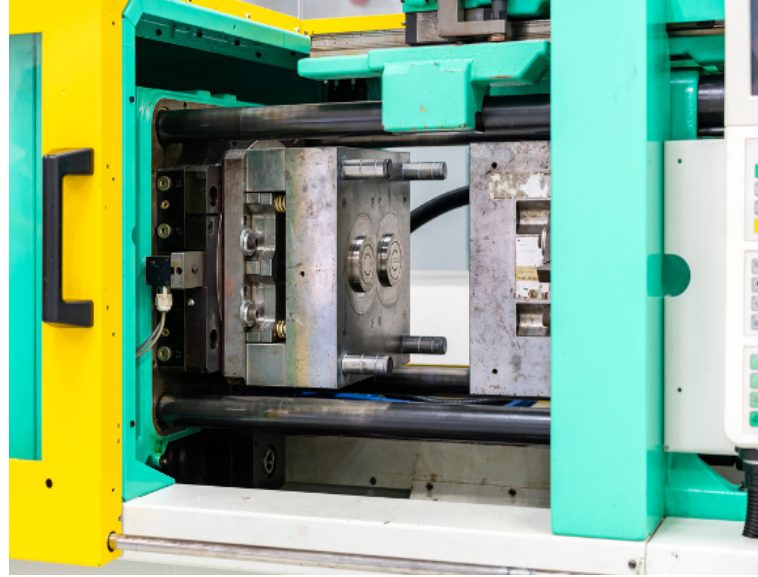

FULL SERVICE AND DELIVERY

allied are far more than suppliers of product. Our design-led specification team work from initial concept and space planning, all the way through to install, to create impactful and purposeful spaces.

We've been in partnership with the leading names in locker and lock manufacturing for over 20 years. We combine engineering, design and technology with excellent service, to deliver bespoke personal storage solutions for every project.

With our level of experience and up-to-date product knowledge, we can advise on the most appropriate technology, products and finishes, meaning specifications are accurate and meet the design brief requirements, first time.

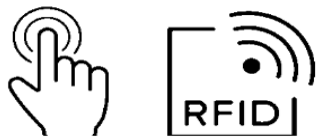

Collaborating with you to deliver purposeful spaces, with people at the forefront of the design intent.

LOCKER PRODUCT TECHNOLOGY

We choose to work with select manufacturers who exude passion for product quality and function over form. We love a stunning finish as much as anyone, but we firmly believe in creating purposeful spaces that positively impact on their users, whether that be a public or commercial space.

We ensure we are always at the forefront of the industry's technology developments, whether that be new materials, new finishes or lock technology to improve performance and meet user needs.

DESIGNING FOR PEOPLE

Whilst companies are currently employing ways to decrease risk of COVID-19 transmission in shared spaces, they are looking to technology to upgrade and deliver long term solutions. Solutions which allow for automation, touch-free operation and decreased energy use. Locker technology will increase safety, and also have a long-term impact on operational costs.

With new, Smart lock technology, businesses can control and audit the use of personal storage, offering reassuring and welcoming features for the individual, whilst exceeding regulation requirements.

THE WORKPLACE

End-of-trip facilities are becoming commonplace in office buildings around the world, rewarding those who choose the healthy option of cycling, jogging or walking to work with comfortable onsite facilities like showers, changing rooms, personal lockers and secure bike parking.

HEALTHCARE

Key-less access control systems, biometric technology and automated access control provide the healthcare sector with facilities that are highly secure and convenient for their staff. Optimal hygiene and ease of cleaning can be introduced through touchless technology, antimicrobial surfaces and online management software.

EDUCATION

With more students working flexibly and remotely, shared lockers and day lockers support the agile education facility, optimising resources. Smart locker systems allow flexible storage solutions, limiting student contact whilst also reducing operational costs.

LEISURE

Charging lockers are the perfect tool for an undisturbed dinner with friends or focused workout at the gym. Designed to keep and charge personal devices safe and sound while the owners take time out from their devices.

RETAIL

The postal service and package delivery drivers are advised to practice contactless deliveries whenever they can. One way this can be accomplished is through intelligent parcel locker installations at the office and in leisure or retail outlets for a safer solution to package delivery.

EXPERIENCE

Jane Delany heads up our locker solutions team at **allied**

Having been involved in commercial interiors for over 20 years, and with a diploma in interior design, she is comfortable and knowledgeable being involved from the first stages of any commercial project. Always with an enthusiastic, can-do approach, she maintains the highest standards, from evolving the design and exceeding project requirements, through to planning and overseeing the execution of snag-free installations, every time.

Contact her to discuss your project's personal storage needs. She believes every set of lockers should be a statement piece of furniture and knows the marketplace so well that she can quickly take the pain out of your search for the perfect product.

“**allied** strives to be at the forefront of innovation, driving quality and reliability into our projects. Our up-to-date knowledge of technology in lockers gives us the flexibility to work closely with architects to fulfil their needs and deliver the space they aspire to achieve.”

Jane Delany – Director, Lockers & Washrooms

QUALITY AND STANDARDS

At **allied** we are committed to upholding and raising building standards.

We carefully select the products we use considering their quality and their response to market demands. We deliver solutions to meet sustainability goals, and deliver on strict health and safety needs as well as maintenance and cleaning standards. At the same time, our focus is on providing innovative solutions and the most technically advanced options for our customers.

Our experienced team of designers are focused on collaborating with architects to deliver locker system designs and space planning using the most up-to-date tools and BIM requirements.

We maintain a quality system designed to meet the requirements of ISO 9001:2015, ISO 14001:2015 and OHSAS 18001:2007. Our project delivery process starts with a robust practical design, right through to an inspection and test plan post installation.

Quality is a key at **allied**

On every project we produce a job specific quality plan. This covers our processes through design, procurement, site installation and project completion through to the issue of O&M manuals, as built drawings and client training sessions.

SUSTAINABILITY ACCREDITATIONS

Environmental and sustainability issues are of high importance to us at **allied**

We are constantly innovating in both our work processes, selected products and finish options to exceed environmental performance expectations and create spaces with the planet and people's wellbeing at the forefront of our designs.

We work only with products which contribute towards zero carbon targets and a building's sustainability credentials.

Creating a healthy work space is becoming less of an ambition, more so a standard amongst construction professionals and we fully support that principle.

BREEAM[®]

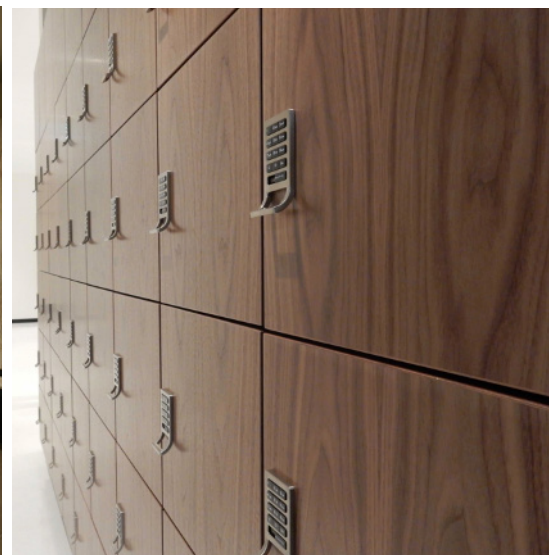

Considered material and finish choices are essential in meeting a building's sustainability goals.

Timber has a proven association with wellbeing and building user satisfaction scores.

An eco focused design intent, accommodated through a timber veneered locker system, whilst also delivering towards sustainability certifications.
